Custom Solutions

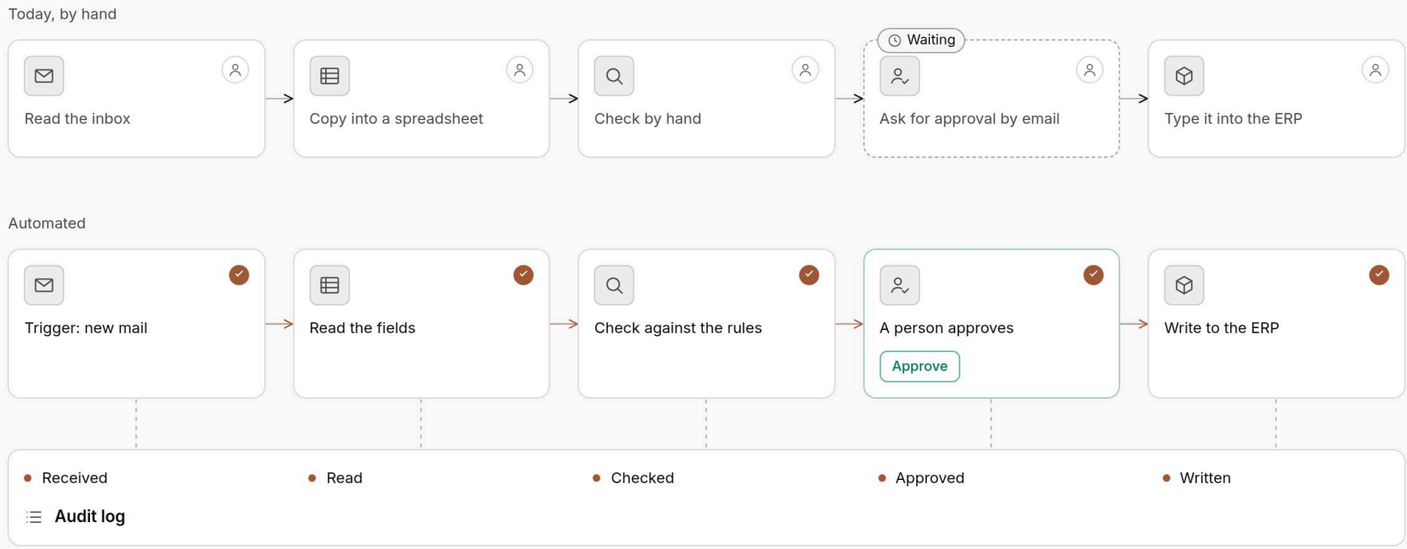

We build software, system integrations and AI-assisted workflows tailored to your existing stack. Systems run inside your security perimeter and hand over cleanly to your IT team.

This overview follows the page at rhenium.tech/services/custom-solutions/, as of November 20, 2026.

Workflow automation

We automate multi-step data gathering, validation and reporting while keeping human approval gates before any write action. A trigger starts the process, software handles the routine steps, and your team gets those hours back.

You receive a working workflow with an audit log. Its price follows from the integrations it needs, listed below.

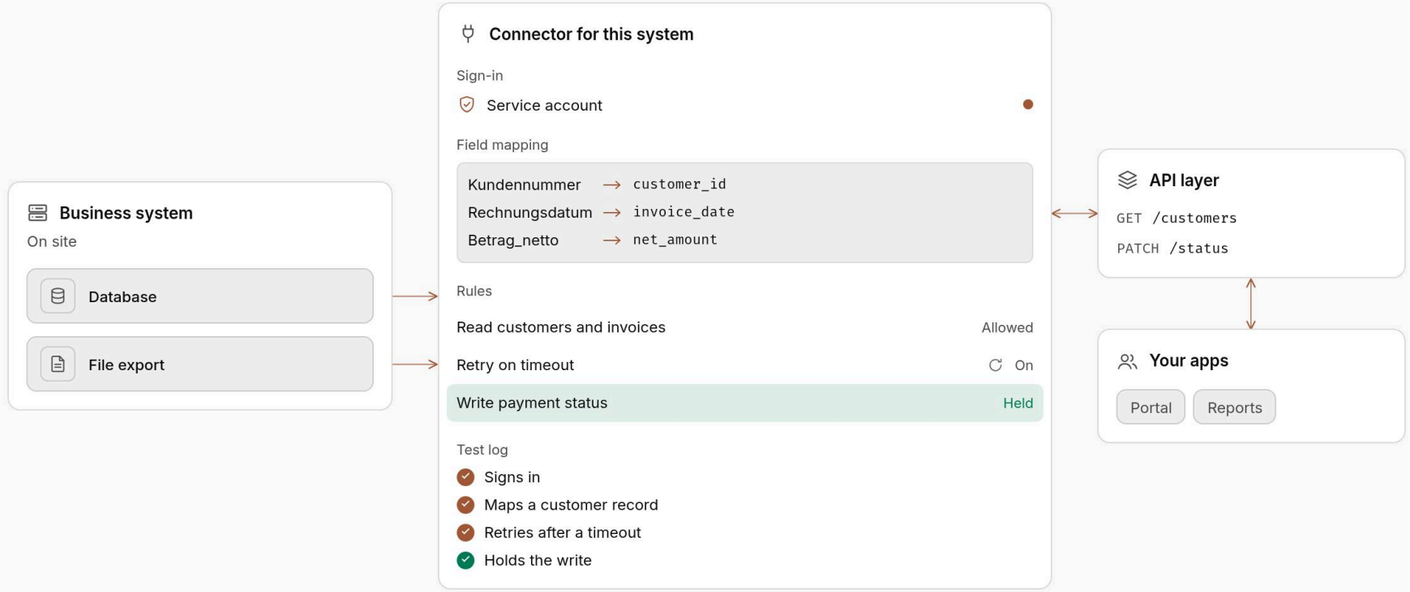

Rhenium Technologies GmbH · Sonnenstr. 31 · 85609 Aschheim
Managing Director: Rastislav Kulazhanka · Amtsgericht München · HRB 218918
VAT ID DE 815 572 704 · +49 173 8127829 · info@rhenium.tech

System integrations

We connect databases, ERP platforms, document archives and internal APIs through documented interfaces, with granular read/write permissions and full audit trails. Sign-in, access rights, tests and handover come with every integration.

You receive the connectors, the access rules and the documentation. A standard integration costs 3,000 to 7,500 €, a custom one 10,000 to 30,000 € and more.

Model adaptation

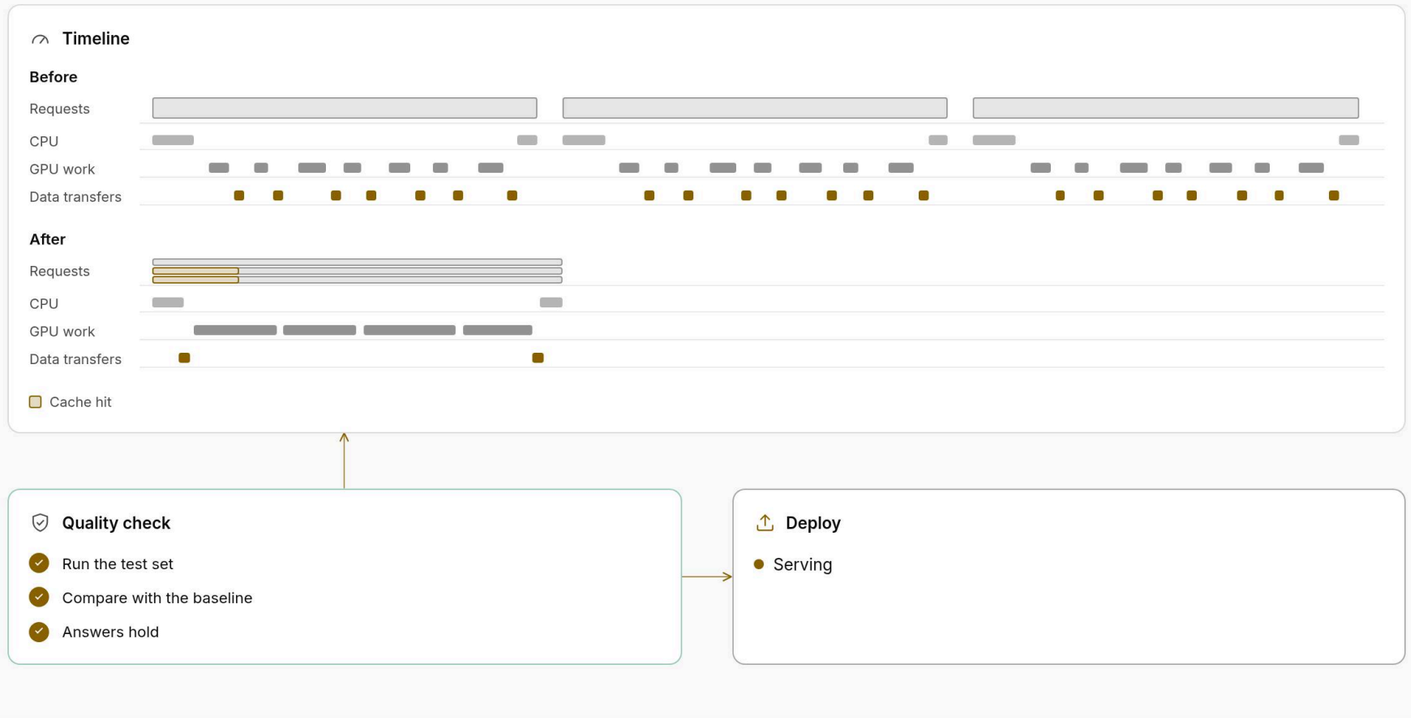

We adapt a general model to one of your tasks, train it on your prepared data and check it against separate test data it hasn't seen. A test run shows whether it pays before you invest in production.

You receive the adapted model with its test results, and for production also the deployment and the documentation. A test run costs 6,000 to 10,000 €, production 18,000 to 45,000 €.

Inference optimization

A performance test finds the bottlenecks on your hardware. We then tune the runtime: batched requests, caching, memory use and lower-precision methods, and for agreed functions on defined GPUs, CUDA or Triton work. Each change is checked for correct results and measured in the whole system.

You receive a tuned deployment with the measurements before and after. Runtime tuning costs 10,000 to 25,000 €, GPU work 20,000 to 60,000 € and more, after a paid analysis.

Private environment

We set up a private environment on your own servers, for Aloy and its engine Infra or the stack you choose: one for production and one for testing, with user sign-in, monitoring, backup and recovery, on an isolated network or air-gapped if needed. It is tested and documented for your team to maintain, with optional ongoing support during agreed business hours.

You receive a running environment and its handover. Setup costs 25,000 to 60,000 €, ongoing support 3,000 or 6,000 € a month.

Prices

Typical ranges from our offers. Scope and functions are agreed before we start.

Service	What you get	Price range
Standard integration	A documented interface with agreed functions. Sign-in, access rights, tests and handover are included.	3,000 to 7,500 € per integration
Custom integration	Two-way data exchange and connection of older systems, with your own approval rules, recovery and audit requirements.	10,000 to 30,000 €+
Model adaptation, test run	One model for one task, with prepared customer data and a few training runs. Checked with separate test data.	6,000 to 10,000 €
Model adaptation for production	We prepare the data and the training. Testing, deployment and documentation are included.	18,000 to 45,000 €
Runtime software tuning	Batched requests, caching and memory use. We also check lower-precision methods.	10,000 to 25,000 €
GPU computation optimization	Agreed functions for defined GPUs, in CUDA or Triton. We check for correct results and measure in the whole system.	20,000 to 60,000 €+
Private environment setup	One production and one test environment. User sign-in, monitoring, backup, recovery and handover are included.	25,000 to 60,000 €
Several environments or sites	Failover, restart, data migration and acceptance are included.	80,000 to 250,000 €+
Ongoing support	Planned maintenance and help during agreed business hours. A working day is 8 hours.	3,000 € a month for 2 days (16 h), or 6,000 € a month for 4 days (32 h)

Examples

Project	What it includes	Example price
Tune the runtime software	Performance test 5,000 € plus software tuning 15,000 €.	20,000 € one-off
Private environment	Setup 40,000 € plus two standard integrations at 5,000 € each, with support on two working days a month.	50,000 € one-off plus 3,000 € a month

For tuning, hardware, model and metrics are agreed in advance, and GPU work starts with a paid analysis. We measure input and output lengths, concurrent requests, response time, throughput and quality, because a faster single step does not prove a faster application.

Support runs during agreed business hours; 24/7 on-call is offered separately.

The ranges are non-binding. Your offer follows the assessment. Usage and third-party costs come on top. All prices plus VAT.

Talk to us

Every project starts with a conversation. Tell us what you are working on and where it gets stuck, and we will write back by email.
